

# Sustainable Transition to the Agile and Green Enterprise

Creating Sustainable Leaders.

## Get to Know STAGE!

The *Sustainable Transition to the Agile and Green Enterprise* (STAGE) project is a unique support mechanism, co-funded by the European Commission, focused on helping enterprises and particular SMEs accomplish their green transformation and become Europe's sustainability leaders.

Its overarching goal is to create a comprehensive platform that will help enterprises receive training and advisory support from European professionals and access private financing for sustainable growth.

### How are we going to do it?

Within STAGE we will establish an ecosystem of resources and advisory centres in order to:

✓ provide innovation and sustainability assessments to

✓ ensure financial support (100 vouchers, EUR 25 000 each) for

thousands of enterprises, and elaborate tailored sustainability transition plans with concrete action steps to achieve sustainability goals.

✓ deliver **training** for hundreds of Sustainability Advisors who will get engaged in a strong and supportive sustainability transition ecosystem.

✓ provide in-depth **industrial training** to hundreds of enterprises.

enterprises to help them access bespoke advisory services for implementing their sustainability transition plans.

✓ facilitate the flow of **private investments** into enterprises with the highest potential to become economically and environmentally sustainable, making them Europe's industrial green leaders.

## Who will benefit from STAGE?

**European Industrial Enterprises** from all sectors, aiming to transform their operations towards sustainable and green processes!

**Sustainability Advisors** with competences in the fields of sustainability transition (i.e., energy efficiency, renewable sources, circular economy, waste management, environmental standards, etc.) and financial expertise (i.e., M&A, corporate finance). Advisors will be matched with enterprises and will help guide them through the STAGE process.

Enterprises and Sustainability Advisors will be involved in the project through a series of **open calls**.

## Where are we now?

First Physical Meeting, Workshop, Sustainability Fair, and more!

The **STAGE kick-off meeting** was initiated in June in Berlin, Germany, where all organisations involved in the project implementation gathered to build a comprehensive action plan.

The STAGE partners got together once more in October in the city of Kaunas, Lithuania, to organise the first of a series of **workshops**, where together with external stakeholders they defined some of the key elements of the project.

STAGE was also represented with its digital booth and onsite stand at the [European Sustainable Energy Week](#) in Brussels!

The [STAGE website](#) is now online! Here you will find out more about the project and the partner organisations who made everything possible!

Visit [STAGE](#)

The STAGE platform will soon be available, where all interactions between the Project Partners, enterprises, and Sustainability Advisors will take place.

### Get involved! Get to the next STAGE!

We would like to make sure that all STAGE initiatives match the needs of small and medium-sized enterprises (SMEs)! If you are an SME and you want to receive support from the STAGE platform, go ahead and fill out [our poll](#)! This will help us adapt our services so that they suit your company's needs.
